Hiring Committee
Division of Student Affairs and Campus Diversity
San Diego State University
Re: Web Developer I (Job No. 555342)

Dear Hiring Committee,

I'm applying for the Web Developer I position with the Division of Student Affairs and Campus Diversity. I build, maintain, and update websites for a living. I run a one-person web studio here in San Diego, and the daily work is what this role describes: content updates on live sites, migrations, responsive design, integrations, and keeping every page aligned to a brand standard.

Some recent work. I built a car-rental booking site with per-vehicle Stripe payment links and a date picker that calculates rental totals. I delivered a full website redesign and brand identity for a real estate client. I migrated and redesigned my own studio site at onyxmode.co. I also write the brand standards my client sites follow, which is the same discipline as keeping university pages consistent with campus web standards, and I spend a lot of time translating what non-technical clients want into working pages.

A few honest notes. I haven't used OmniCMS specifically, but I've picked up every platform I've ever needed, quickly, because my whole career is self-taught, from professional audio software as a teenager to the web stack I use today. On education, I have four years of community college coursework and film school training rather than a degree, plus two years of professionally applied web development for paying clients. I believe that's the path your posting's substitution provision describes. And on accessibility: my sites are responsive and user-friendly by default, and I'm ready to make formal WCAG standards a core part of how I work.

I'm local, available immediately, and the hybrid arrangement fits my family life well. I'd be glad to put this work ethic behind a team whose whole mission is students.

Thank you for your consideration,

Anthony Magdalena
